

TS0035UK03

RL Series

Two Stage Light Oil Burners

The RL series of burners covers a firing range from 154 to 2700 kW, and it has been designed for use in low or medium temperature hot water boilers, hot air or steam boilers, diathermic oil boilers.

All models are suitable for combustion of light oil and blend of light oil and biodiesel up to 5%.

Operation is "two stage"; the burners are fitted with a microprocessor-based control panel, which supplies indication of burner status and fault causes.

Optimisation of sound emissions is guaranteed by the special design of the air suction circuit. The elevated performance of the fans and combustion head, guarantee flexibility of use and excellent working at all firing rates.

The exclusive design ensures reduced dimensions, simple use and maintenance. A wide range of accessories guarantees elevated working flexibility.

FIRING RATES

HYDRAULIC CIRCUITS

The burners are fitted with three valves (a safety valve and two oil delivery valves).

A control device, on the basis of required output, regulates oil delivery valves opening, allowing light oil passage through the valves and the nozzle.

Delivery valves opening supplies the two-stage hydraulic ram which regulates air delivery in relation to the fuel burnt.

The pumping group is fitted with a pump, an oil filter and a regulating valve, that adjust atomised pressure.

Example of adjustable hydraulic ram of RL 34 - 44 MZ burners.

RL 34 MZ

RL 44 MZ - 50 - 64 MZ

RL 70 - 100 - 130

RL 190

With ring distribution oil systems, the feasible drawings and dimensioning are the responsibility of specialised engineering studios, who must check compatibility with the requirements and features of each single installation.

Ventilation

The ventilation circuit produces low noise levels with high performance pressure and air output, in spite of the compact dimensions.

On RL 50-100-130 models, the use of reverse curve blades and sound proofing material keeps noise level very low.

In the RL 34 MZ-44 MZ-64 MZ-190-250 MZ models, sound has been reduced by the special design of the air suction circuit.

An hydraulic ram allows to have a right air flow in any operational moment and the closure of the air damper with burner in stand-by.

Example of the air damper on RL 50 burners.

Example of HCS (Housing Cooling System) working concept.

The RL 34 MZ and RL 44 MZ are realised with a new structure made by an innovative technology based on a new fibreglass reinforced polyamide material, with high thermal and mechanical characteristics, instead of the traditional aluminium.

This allows big advantages in terms of lay-out rationalisation, weight and dimensions reduction.

In order to guarantee the correct exercise temperature for the internal burner components in every working conditions, the new structure includes an innovative patented cooling technology.

Between the burner front base and the reinforcing steel front plate, had been create an air cavity offering an high thermal insulation against the front boiler reflection heat, and to further improve the insulation efficiency the innovative **HCS (Housing Cooling System)** technology had been developed. Inside the front base cavity an air circulation is activated with continuous air volume refresh to obtain an active cooling system and avoid any heat transfer to the electrical component housing.

> Combustion Head

Different lengths of the combustion head can be chosen for the RL series of burners.

The choice depends on the thickness of the front panel and the type of boiler.

Depending on the type of generator, check that the penetration of the head into the combustion chamber is correct.

The internal position of the combustion head can easily be adjusted to the maximum defined output by adjusting a screw fixed to the flange.

Example of a RL burner combustion head.

DIMENSIONS OF THE FLAME

Example:
 Burner thermal output = 2000 kW;
 L_{flame} (m) = 2,7 m (medium value);
 D_{flame} (m) = 0,8 m (medium value)

Operation

BURNER OPERATION MODE

With two stage operation, the RL burners can follow the temperature load requested by the system.

A modulation ratio of 2:1 is reached, thanks to the “two nozzles” technique; the air is adapted to the hydraulic ram positions.

On “two stage” operation, the burner gradually adjusts output to the requested level, by varying between the two pre-set levels (see picture A).

“TWO STAGE” OPERATION

Picture A

All RL series burners are fitted with a new microprocessor control panel for the supervision during intermittent operation. For helping the commissioning and maintenance work, there are two main elements:

The lock-out reset button is the central **operating element** for resetting the burner control and for activating / deactivating the diagnostic functions.

Both elements are located under the transparent cover of lock-out reset button, as showed below.

The multi-color LED is the central **indication element** for visual diagnosis and interface diagnosis.

There are two diagnostic choices, for indication of operation and diagnosis of fault cause:

VISUAL DIAGNOSIS

INTERFACE DIAGNOSIS

By the interface adapter and a PC with dedicated software or by a predisposed flue gas analyzer (see paragraph accessories).

INDICATION OF OPERATION

In normal operation, the various status are indicated in the form of colour codes according to the table below. The interface diagnosis (with adapter) can be activated by pressing the lock-out button for > 3 seconds.

COLOR CODE TABLE

Operation status	Color code table
Stand-by	● ● ● ● ● ● ● ●
Pre-purging	● ● ● ● ● ● ● ●
Ignition phase	● ● ● ● ● ● ● ●
Flame OK	● ● ● ● ● ● ● ●
Poor flame	● ● ● ● ● ● ● ●
Undervoltage, built-in fuse	● ● ● ● ● ● ● ●
Fault, alarm	● ● ● ● ● ● ● ●
Extraneous light	● ● ● ● ● ● ● ●

● LED off

DIAGNOSIS OF FAULT CAUSES

After lock-out has occurred, the red signal lamp is steady on. In this status, the visual fault diagnosis according to the error code table can be activated by pressing the lock-out reset button for > 3 seconds.

The interface diagnosis (with adapter) can be activated by pressing again the lock-out button for > 3 seconds.

The flashing of red LED are a signal with this sequence :

(e.g. signal with n° 3 flashes – faulty air pressure monitor)

ERROR CODE TABLE

POSSIBLE CAUSE OF FAULT	FLASH CODE	
No establishment of flame at the end of safety time:	<ul style="list-style-type: none"> - faulty or soiled fuel valves - faulty or soiled flame detector - poor adjustment of burner, no fuel - faulty ignition equipment 	● 2x flashes
Faulty air pressure monitor		● 3x flashes
Extraneous light or simulation of flame on burner start up		● 4x flashes
Loss of flame during operation:	<ul style="list-style-type: none"> - faulty or soiled fuel valves - faulty or soiled flame detector - poor adjustment of burner 	● 7x flashes
Wiring error or internal fault		● 10x flashes

START UP CYCLE

RL 34 MZ - 44 MZ - 50 - 64 MZ - 70 - 100 - 130 - 190 - 250 MZ

0 s The burner begins the firing cycle: the motor and transformer are supplied; the hydraulic ram opens in the pre-purge position.

22÷29 s Ignition: the VS and VF1 valves are supplied.
 36 s If the control device TR is closed or has been replaced by a jumper wire, the 2nd stage valve VF2 opens; the fuel is sprayed out through the 2nd stage nozzle and the hydraulic ram opens the air damper in the 2nd stage position.

All models of the RL burner series have an easily accessible control panel for the electrical components housing and wiring.

In particular the new RL 34-44 MZ models, thanks to the new structure concept, have a extremely clean electrical layout to optimise the commissioning and maintenance speed.

On these models the electrical connection are done by a Plug&Socket system, accessible from the external of the cover.

The electrical wiring of all RL burner models are very easy to do following the wiring diagrams included in the instruction handbook.

Electrical connections must be made by qualified and skilled personnel, according to the local norms.

Example of electrical components housing and Plug&Socket system for electrical connection of RL 34 - 44 MZ.

The following table shows the supply lead sections and the type of fuse to be used.

Emissions

The emission data has been measured in the various models at maximum output, according to EN 267 standard.

The NOx emissions of RL 34-44-64-250 MZ models are conforming to the class 2 of EN 267.

Installation Description

Installation, start up and maintenance must be carried out by qualified and skilled personnel.
All operations must be performed in accordance with the technical handbook supplied with the burner.

BURNER SETTING

All the burners have slide bars, for easier installation and maintenance.

After drilling the boilerplate, using the supplied gasket as a template, dismantle the blast tube from the burner and fix it to the boiler.

Adjust the combustion head.

Refit the burner casing to the slide bars.

Install the nozzle, choosing this on the basis of the maximum boiler output and following the diagrams included in the burner instruction handbook.

Check the position of the electrodes.

Close the burner, sliding it up to the flange, keeping it slightly raised to avoid the flame stability disk rubbing against the blast tube.

HYDRAULIC AND ELECTRICAL CONNECTIONS AND START UP

The burners are supplied for connection to two pipes fuel supply system.

Connect the ends of the flexible pipes to the suction and return pipework using the supplied nipples.

Make the electrical connections to the burner following the wiring diagrams included in the instruction handbook.

Prime the pump by turning the motor.

On start up, check:

- Pressure pump (to max. and min.)
- Combustion quality, in terms of unburned substances and excess air.

BURNER MAINTENANCE

The maintenance of RL burners is very simple thanks to the sliding bars system that allows an easy access to the internal components.

In particular the RL 34-44 MZ models have a new sliding bars system to make easier the access to the combustion head.

The RL 190 and RL 250 MZ have new reinforced sliding bars that make very strong the burner structure during maintenance.

Burner Accessories

Nozzles type 60° B

The nozzles must be ordered separately. The following table shows the features and codes on the basis of the maximum required fuel output.

BURNER	GPH	RATED OUTPUT (kg/h)			NOZZLE CODE
		at 10 bar	at 12 bar	at 14 bar	
▶ RL 34 MZ	1,00	4,1	4,5	4,9	3042077

Extended heads

“Standard head” burners can be transformed into “extended head” versions, by using the special kit. The kits available for the various burners, giving the original and the extended lengths, are listed below.

BURNER	‘STANDARD’ HEAD LENGTH (mm)	‘EXTENDED’ HEAD LENGTH (mm)	KIT CODE
▶ RL 34 MZ	216	351	3010426
▶ RL 44 MZ	216	351	3010425
▶ RL 50	216	351	3010075
▶ RL 64 MZ	250	385	3010114
▶ RL 70	250	385	3010114
▶ RL 100	250	385	3010115
▶ RL 130	250	385	3010116
▶ RL 190	370	530	3010444
▶ RL 250 MZ	378	528	3010422

Spacer kit

If burner head penetration into the combustion chamber needs reducing, varying thickness spacers are available, as given in the following table:

BURNER	SPACER THICKNESS S (mm)	KIT CODE
▶ RL 34 MZ - 44 MZ - 50	90	3010095
▶ RL 64 MZ - 70 - 100 - 130	135	3010129
▶ RL 190 - 250 MZ	110	3000722

Sound proofing box

If noise emission needs reducing even further, sound-proofing boxes are available, as given in the following table:

BURNER	BOX TYPE	AVERAGE NOISE REDUCTION [dB(A)](*)	BOX CODE
▶ RL 34 MZ - 44 MZ - 50 - 70 - 100 - 130	C1/3	10	3010403
▶ RL 64 MZ - 190	C4/5	10	3010404
▶ RL 250 MZ	C7	10	3010376

(*) according to EN 15036-1 standard

Connection flange kit

A kit is available for use where the burner opening on the boiler is of excessive diameter.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ - 50	3010138

Degasing unit

With single pipe systems, you can find air in the oil sucked by the pump that comes from the oil itself due to negative pressure or to a faulty seal.

To solve this problem, we recommend fitting a degassing unit near the burner. Two versions are available with or without filter:

BURNER	DEGASING UNIT WITH FILTER CODE	DEGASING UNIT WITHOUT FILTER CODE
▶ RL 34 MZ - 44 MZ - 50 - 64 MZ	3010055	3010054
▶ RL 70 - 100 - 130 - 190 - 250 MZ		

Biodiesel kit

For burning Biodiesel fuel, a special kit is available.

BURNER	KIT CODE
▶ RL 28 (out of catalogue model)	3010289
▶ RL 38 (out of catalogue model)	3010290
▶ RL 50	3010291
▶ RL 70	3010292
▶ RL 100	3010358
▶ RL 130	3010358
▶ RL 190	-

Status Panel kit

The RL burners can be equipped with an exclusive electronic device "Status Panel" which continuously monitors and displays all the burner operational modes and picks up any anomalies during the operational cycle.

BURNER	KIT CODE
▶ RL 50 - 64 MZ - 70 - 100 - 130 - 190 - 250 MZ	3010322

Volt free contact kit

A volt free contact kit is available for installation onto the burner. It can be used for a remote interface between burner operating signals.

Every burner can be equipped with a single kit to remote the flame presence signal or the burner lockout indication.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ - 64 MZ	3010419

PC interface kit

To connect the flame control panel to a personal computer for the transmission of operation, fault signals and detailed service information, an interface adapter with PC software are available.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ - 50 - 64 MZ - 70 - 100 - 130 - 190 - 250 MZ	3002719

Ground fault interrupter kit

A "Ground fault interrupter kit" is available as a safety device for electrical system fault.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ	3010448

Post-ventilation kit

To have 20 s ventilation after opening of thermostats chain, a special kit is available.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ	3010453

Hours counter kit

To measure the burner working time a hours counter kit is available.

BURNER	KIT CODE
▶ RL 34 MZ - 44 MZ	3010450

Specification

DESIGNATION OF SERIES

A specific index guides your choice of burner from the various models available in the RL series. Below is a clear and detailed specification description of the product.

Series: R	
Fuel:	S Natural Gas
	SP LPG
	L Light oil
	LS Light oil/Methane
	N Heavy oil
Size	
Setting:	/1 Single stage
	... Two stage
	/M Modulating
Emission:	... Class 1 EN267 - EN676
	MZ Class 2 EN267 - EN676
	BLU Class 3 EN267 - EN676
	MX Class 1 EN267
	Class 3 EN676
Head length:	TC standard head
	TL extended head
Flame control system:	
	FS1 Standard (1 stop every 24 h)
	FS2 Continuous working (1 stop every 72 h)
Electrical supply to the system:	
	1/230/50 1/230V/50Hz
	1/220-230/50-60 1/220-230V/50-60Hz
	3/230/50 3/230V/50Hz
	3/400/50 3N/400V/50Hz
	3/230-400/50 3/230V/50Hz - 3N/400V/50Hz
	3/220/60 3/220V/60Hz
	3/380/60 3N/380V/60Hz
	3/220-380/60 3/220V/60Hz - 3N/380V/60Hz
	3/220-400/50-60 3/220-230V/50-60Hz
	3/380-400V/50-60Hz
Auxiliary voltage:	
	230/50-60 230V/50-60Hz
	220-230/50-60 220-230V/50-60Hz
	110/50-60 110V/50-60Hz
ID:	Differential switch

PRODUCT SPECIFICATION

RL 34 MZ - 44 MZ models

Burner

Monoblock forced draught oil burner (light oil or blend of light oil and biodiesel up to 5%) with two stage operation, fully automatic, made up of:

- Air suction circuit
- High performance fan with straight blades
- Air damper for air setting controlled by an adjustable hydraulic ram
- Starting motor at 2800 rpm, single-phase / 220-230V / 50-60Hz or three-phase 380-400V / 50-60Hz
- Combustion head, that can be set on the basis of required output, fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - ignition electrodes
 - flame stability disk
- Exclusive patented HCS (Housing Cooling System) with high thermal insulation and air circulation with continuous air volume refresh for an active cooling system and avoid heat transfer to the electrical component housing
- Gears pump for high pressure fuel supply, fitted with:
 - filter
 - pressure regulator
 - connections for installing a pressure gauge and vacuumeter
 - internal by-pass for single pipe installation
- Valve unit with an oil safety valve and two delivery oil valves on the output circuit
- Photocell for flame detection
- Microprocessor-based flame control panel, with diagnostic function
- Plugs and Sockets for electrical connection, accessible from the external of the cover
- Burner on/off switch
- Flame inspection window
- 1st - 2nd stage manual switch
- Slide bars for easier installation and maintenance
- Protection filter against radio interference
- IP 44 electric protection level.

Conforming to:

- 89/336 (2004/108) EC directive (electromagnetic compatibility)
- 73/23 (2006/95) EC directive (low voltage)
- 92/42/EC directive (performance)
- 98/37/EC directive (machinery)
- EN 267 (liquid fuel burners).

Standard equipment:

- 2 flexible pipes for connection to the oil supply network
- 2 gaskets for the flexible pipes
- 2 nipples for connection to the pump
- 4 screws for fixing the burner flange to the boiler
- 1 thermal screen
- 2 Plugs for electrical connection (RL 34-44 MZ single-phase)
- 3 Plugs for electrical connection (RL 44 MZ three-phase)
- 2 slide bar extensions (for the extended head models)
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

Available accessories to be ordered separately:

- Nozzles
- Head extension kit
- Head length reduction kit
- Sound-proofing box
- Connection flange kit
- Degasing unit (with or without filter)
- Biodiesel kit
- Status panel kit
- Volt free contact kit
- PC interface kit
- Ground fault interrupter
- Post-ventilation kit
- Hours counter kit.

RL 50 - 64 MZ - 70 - 100 - 130 - 190 - 250 MZ models

Burner

Monoblock forced draught oil burner (light oil or blend of light oil and biodiesel up to 5%) with two stage operation, fully automatic, made up of:

- Air suction circuit lined with sound-proofing material
- Fan with reverse curve blades (RL 50 - 70 - 100 - 130 models) or straight blades (RL 64 MZ - 190 - 250 MZ models)
- Air damper for air setting controlled by an adjustable hydraulic ram (or by a servomotor for the RL 250 MZ)
- Starting motor at 2800 rpm, three-phase 400V with neutral, 50Hz
- Combustion head, that can be set on the basis of required output, fitted with:
 - stainless steel end cone, resistant to corrosion and high temperatures
 - ignition electrodes
 - flame stability disk
- Gears pump for high pressure fuel supply, fitted with:
 - filter
 - pressure regulator
 - connections for installing a pressure gauge and vacuumeter
 - internal by-pass for single pipe installation
- Valve unit with an oil safety valve and two delivery oil valves on the output circuit
- Photocell for flame detection
- Microprocessor-based flame control panel, with diagnostic function
- Burner on/off switch
- Flame inspection window
- 1st - 2nd stage manual switch
- Slide bars for easier installation and maintenance
- Protection filter against radio interference
- IP 44 electric protection level.

Conforming to:

- 89/336 (2004/108) EC directive (electromagnetic compatibility)
- 73/23 (2006/95) EC directive (low voltage)
- 92/42/EC directive (performance)
- 98/37/EC directive (machinery)
- EN 267 (liquid fuel burners).

Standard equipment:

- 2 flexible pipes for connection to the oil supply network
- 2 gaskets for the flexible pipes
- 2 nipples for connection to the pump
- 4 screws for fixing the burner flange to the boiler
- 1 thermal screen
- Fairleads for electrical connections (RL 50 models)
- 2 slide bar extensions (for the extended head models and the RL 190 - 250 MZ models)
- Instruction handbook for installation, use and maintenance
- Spare parts catalogue.

Available accessories to be ordered separately:

- Nozzles
- Head extension kit
- Head length reduction kit
- Sound-proofing box
- Degassing unit (with or without filter)
- Biodiesel kit
- Connection flange kit
- Status panel kit
- PC interface kit.
